

This scatter plot displays the relationship between True Values (X-axis) and Predicted Values (Y-axis) for the 'True' variable. The X-axis ranges from 70 to 180, and the Y-axis ranges from 70 to 180. The data points are blue circles. The plot shows a strong positive correlation, with points clustered along the diagonal line where predicted values equal true values. There is a slight over-prediction for true values above 140 and under-prediction for true values below 100.
